TECHNOLOGIES

Languages/Frameworks: React, Next.js, Javascript, Typescript, HTML, CSS, Tailwind, Node.js
Tools: Cursor, Claude Code, Shopify, Sanity, Contentful, Storybook, Figma, AWS, Prisma, GitHub, Jira, Stoplight, VWO Testing, Lighthouse, Netlify, Vercel

PROFESSIONAL SUMMARY

I am a frontend software engineer with 5 years of engineering experience and over 13 years collaborating across disciplines (including in my past life as an architect). I have built my career on closing the gap between design intent and production reality: collaborating directly with designers to resolve feasibility early, holding a high bar for pixel-perfect implementation, and knowing when a system should scale across use cases and when that flexibility becomes a problem. My architectural and agency background has trained me in systems thinking and visual judgment, and I have a genuine love for crafting experiences that feel intuitive and effortless, even when the underlying technology is complex.

WORK EXPERIENCE

Applied Intuition
Software Engineer **Dec 2025 - May 2026, October 2026**

- Architected and developed a password-protected internal brand portal for employees, featuring custom Sanity CMS schemas including singleton documents, image types, and color swatch types to enable structured, maintainable brand asset management.
- Designed and implemented Sanity CMS schemas to power modular component integration and flexible page builder functionality for a content-rich product website, supporting structured content management across 27 pages.
- Built and maintained a library of reusable UI components in Storybook for both the brand portal and product website, enabling consistent and scalable design implementation across each surface.

Green Stone Co
Frontend Software Engineer **Feb 2025 - Nov 2025**

- Built a comprehensive component library for larsondoors.com, creating a scalable design system with over 100 reusable components, which accelerated development across multiple project streams.
- Led integration of React component system into headless CMS environment, balancing design consistency with content management flexibility while handling complex data structures and dynamic content requirements.
- Improved mobile Lighthouse accessibility scores from the low 60s to 100, addressing semantic HTML structure, ARIA labels, and keyboard navigation.

&Kind
Frontend Software Engineer **Jan 2024 - Jan 2025**

- Led development for level.co's site, introducing custom functionality, reusable components, and optimizing site performance through 50+ bug fixes.
- Developed custom Shopify content schemas to support dynamic product pages and marketing campaigns.
- Integrated key third-party services (ie BazaarVoice), driving 11x growth in product reviews (from 82 to 902) on level.co.

Bread
Fullstack Software Engineer **July 2023 - Jan 2024**

- Enhanced Privy's authentication SDK with social login integrations (Facebook, LinkedIn, Discord) and showcased its flexibility through the Privy demo site, illustrating how users can customize Web3 authentication flows.
- Built a custom blog implementation for Privy using React, Tailwind, and Contentful CMS to migrate content from Medium, improving content discoverability.

Raw Materials

Frontend Software Engineer **July 2020 - July 2023**

- Launched Peddle's funnel flow, integrating the frontend with their existing API and managing complex state across a multi-step flow using React Context.
- Built the Peddle funnel embed tool, a compact mini-flow enabling partner companies to host a Peddle funnel on their own websites.
- Redesigned Peddle's homepage, implementing a new SEO structure and integrating Sanity CMS to enhance content management efficiency and empower marketing teams with greater flexibility.

EDUCATION

Flatiron School – Software Engineering Immersive, Spring 2019

Bennington College – BA in Architecture, Class of 2011
